

OFFICIAL SECURITY CLEARANCE & VERIFICATION KEY

EnigmaX Security Challenge • Encoded Candidate Token (Base64)

RU5Ye1JlNXVM30=

PROFESSIONAL SUMMARY

Passionate and analytical Cybersecurity Researcher and Full-Stack Systems Engineer with 4+ years of hands-on expertise across offensive security, web application penetration testing, vulnerability discovery, and DevSecOps automation. Proven track record identifying zero-day attack vectors and business logic flaws across enterprise targets (HackerOne & Bugcrowd Hall of Fame). Captain of competitive CTF teams specializing in web exploitation, binary analysis, and cryptographic puzzles. Dedicated to bridging offensive security insights with resilient software engineering.

TECHNICAL EXPERTISE

Offensive Security:	Web App Penetration Testing (OWASP Top 10), API Exploitation (GraphQL/REST), SSRF, IDOR, SQLi, XSS, OAuth/JWT Flaws, Subdomain Takeovers, Privilege Escalation
Security Tooling:	Burp Suite Professional, OWASP ZAP, Nuclei, Nmap, Wireshark, Metasploit, Ghidra, Frida, Sqlmap, Amass, Subfinder, ffuf, Hashcat, Docker
Languages & Systems:	Python, Go, JavaScript/TypeScript (Node.js, React), Rust, Bash scripting, C/C++, SQL, HTML5/CSS3, Linux, Git
DevSecOps & Defense:	CI/CD Pipeline Security, SAST/DAST integration (Semgrep, Snyk), Linux Hardening, Cloud Security (AWS/GCP IAM & WAF), Zero-Trust Architecture

PROFESSIONAL EXPERIENCE

Senior Application Security Engineer — Aetheria Cyber Defense Labs

2024 – Present

Application Security, Threat Modeling & Automated Vulnerability Detection

- Architected automated DAST and reconnaissance pipelines screening over 250+ microservices daily, cutting mean time to vulnerability detection (MTTD) by 68%.
- Conducted in-depth penetration tests against enterprise single-page applications, APIs, and Kubernetes infrastructure, discovering 40+ high-severity vulnerabilities before production release.
- Mentored engineering teams in secure code design, conducting threat modeling sessions and establishing proactive vulnerability remediation SLAs.

Independent Security Researcher & Bug Bounty Hunter — HackerOne / Bugcrowd

2022 – Present

Global Responsible Disclosure & Vulnerability Discovery

- Ranked in the top 1% on competitive responsible disclosure platforms; acknowledged in 20+ corporate Halls of Fame including Fortune 500 tech leaders.
- Discovered and responsibly disclosed critical vulnerabilities including blind remote SSRF in cloud webhook engines, account takeovers via OAuth race conditions, and distributed IDOR flaws.
- Authored detailed technical vulnerability writeups, proof-of-concept exploits, and remediation guides used by engineering teams globally.

Full-Stack Security Developer — FrostNet Systems

2021 – 2024

Secure Software Engineering & Internal Tooling

- Engineered high-throughput event logging and intrusion detection pipelines in Go and TypeScript handling 10M+ events/day.
- Implemented strict CSP, CORS policies, secure authentication mechanisms, and hardened cryptographic key rotations across customer-facing portals.

FEATURED SECURITY PROJECTS & RESEARCH

SnowAngel Recon Suite — github.com/mitsuhasnowangel1/snowangel-recon

Go • Python • Docker

- Developed an asynchronous reconnaissance framework coordinating passive DNS discovery, HTTP probing, and certificate transparency parsing with Nuclei alerting.

Kimi-Guard: Intelligent API Threat Mitigation Engine — Open Source

Rust • TypeScript • WebAssembly

- Built an inline reverse-proxy filter analyzing HTTP payloads for credential stuffing, AST-based SQLi evasion, and automated scrapers with sub-millisecond overhead.

CERTIFICATIONS & HONORS

- OSCP — Offensive Security Certified Professional (2024)
- eWPTXv2 — Web App Penetration Tester eXtreme (2023)
- CRTP — Certified Red Team Professional (2025)
- EnigmaX CTF 2026 Champion — 1st Place (Token: RU5Ye1JlNXVM30=)
- DEF CON CTF Qualifier — FrostByte Team Lead (Top 25)

EDUCATION & CREDENTIALS

- B.S. in Computer Science & Information Security
- Metropolitan Institute of Technology
- Graduated Summa Cum Laude • 2019 – 2023
- Thesis: "Heuristic Detection of Second-Order Vulnerabilities in Distributed Microservice Architectures"
